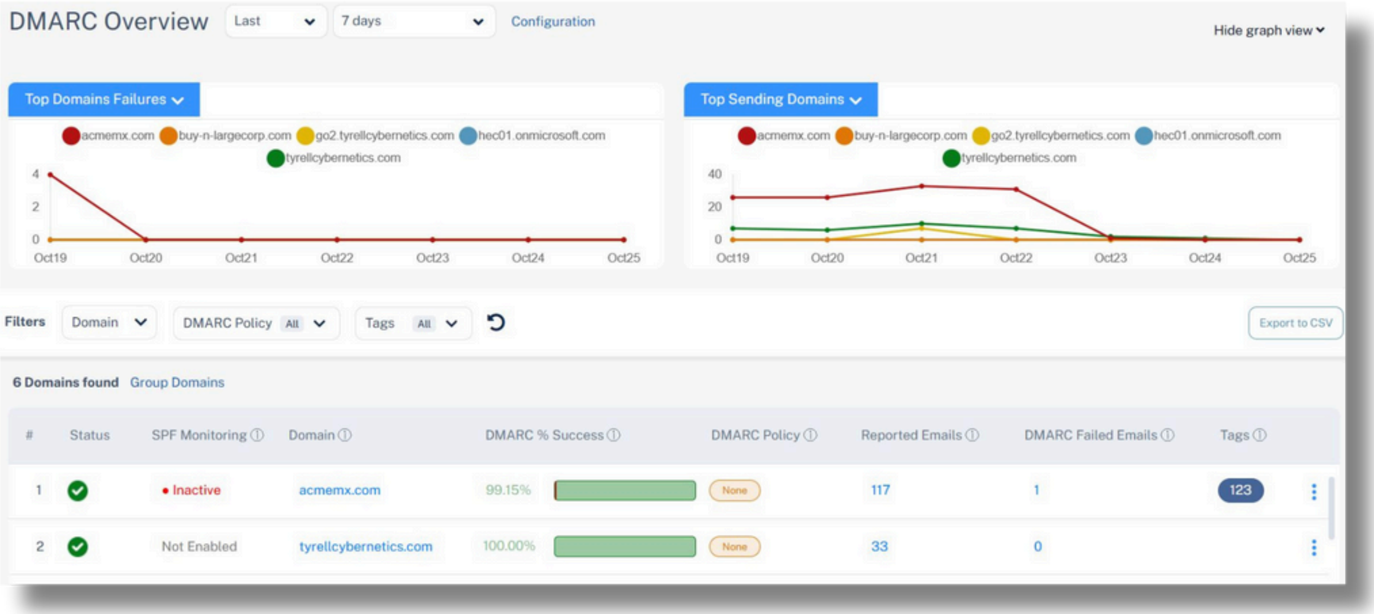
Harmony
Email & Collaboration

DMARC and SPF Management Platform

The DMARC authentication protocol protects domains from email spoofing, phishing attacks and otherwise unauthorized activities.

Harmony Email & Collaboration's DMARC management tool provides visibility to all DMARC failure reports, grouped by domain and services. We include seamless Sender Policy Framework (SPF) management as part of our DMARC management. Simply provide your authorized sending sources, and we'll handle the technicalities of configuring and maintaining your SPF records. Our platform takes the complexity out of both DMARC and SPF management, allowing you to focus on your business while we maintain robust email authentication and prevent unauthorized use of your domain.



6 Domains found

#	Status	SPF Monitoring	Domain	DMARC % Success	DMARC Policy	Reported Emails	DMARC Failed Emails	Tags
1	✓	● Inactive	acmemx.com	99.15%	None	117	1	123
2	✓	Not Enabled	tyrellcybernetics.com	100.00%	None	33	0	

Why Does This Matter?

Far too often, we see that organizations have an overly permissive DMARC policy. When DMARC fails, the email in question hasn't passed authentication checks, indicating a potential phishing attack.

DMARC failure is not a guarantee that there's a phishing email; neither is passing DMARC a guarantee of authenticity. It is another piece of information that helps determine whether a message is phishing or not.

Being on top of your DMARC configuration proactively will help reduce phishing, stop more attacks, and eliminate spoofing of your brand.

Further, Google and Yahoo now require DMARC to be configured, at risk of blocking inbound emails. Our recommendations can ensure compliance and ensure your organization's mail delivery.

The Key Benefits

- Built-in search engine to see all DMARC failure reports with the ability to drill down per domain and subdomain
- Automatic sending source classification (Good or Bad)
- RUA mailbox to ensure full-scale DMARC failure reporting (hosted by self or Check Point)
- Actionable recommendations and changes to DMARC policies
- SPF Management in the same, single dashboard
- Full audit trail of DMARC and SPF changes
