

Managed Firewall Services (MFW)

SUMMARY

Modern Next-generation firewalls are complex tools that are essential for network security but require ongoing care, maintenance and management. ADS Managed Firewall Services provide the proactive support needed to ensure that your firewalls are continuously effective. Patches, updates, configurations, life-cycle management, and incident response are all handled by our team of security experts.

FEATURES

Our managed firewall services are tailored to your security goals and priorities, to solve your problems on your terms. Whether you need ongoing assistance with your established firewall solution, or help implementing new technology, our MFW

- **Consultative onboarding** process to develop an understanding of your security needs and priorities, enabling us to most efficiently meet your desired outcomes.
- **Life-Cycle Management**, including regular updates, patch management, and preparing for retirement and replacement.
- **Policy and System Analysis and Reporting** ensuring that your firewall architecture and configuration is correctly set up to meet business and compliance needs. Detailed and clear reporting allows you to understand your environment and any security changes made.
- **Rapid Response and Remediation** to incidents ensures minimum disruption to your key business process, and continuous comprehensive security.
